## MODEL QUESTION PAPER

Programme name: Mechanical Engineering

Course code: 3021

Time : 3 Hours

Semester :3

Course name: Strength of Materials

Max.Marks : 75

1. Answer all the following questions
( $9 \times 1=9$ Marks)

| 1 | The ratio of the change in dimension of the body due to the deformation to its <br> original dimension in the direction perpendicular to the force is called----------- <br> - strain. | MO 1.01 | R |
| :--- | :--- | :--- | :--- |
| 2 | The ratio of ultimate stress to the design stress is called ---------- | MO 1.03 | U |
| 3 | A load that is spread along the beam over the entire length or part of its length is <br> called--------- | MO 2.01 | U |
| 4 | Point at which the bending moment is zero or changes sign from positive to <br> negative or vice versa is called ------ | MO 2.02 | R |
| 5 | The layer between top and bottom layers of the beam which is unchanged in <br> length due to bending is called ------- | MO 3.01 | R |
| 6 | The lateral displacement of a beam under the load is termed as --------- | MO 3.04 | U |
| 7 | Failure along longitudinal section is due to ------ stresses set up in the walls of <br> the cylinder. | MO 4.03 | R |
| 8 | -------- is the ratio of the mean coil diameter to the diameter of the spring wire. | MO 4.02 | R |
| 9 | Torsional section modulus is defined as the ratio of the ------- to the radius of <br> the shaft. | MO 4.01 | U |

2. Answer any Eight questionsfrom the following
$8 \times 3=24$ Marks)

| 1 | Differentiate Lateral strain and Longitudinal strain. What is factor of safety? | MO 1.01 | U |
| :---: | :--- | :--- | :--- |
| 2 | A load of 80 kN is to be raised with the help of a steel wire. Find the minimum <br> diameter of the steel wire if the stress is not to exceed $100 \mathrm{MN} / \mathrm{m}^{2}$. | MO 1.05 | U |
| 3 | A steel rod 4 m long and 20mm in diameter is subjected to an axial tensile force <br> of 45 kN . Determine the change in length, diameter and volume of the rod. Take <br> $\mathrm{E}=2.1 \mathrm{x} 10^{5} \mathrm{~N} / \mathrm{mm}^{2}$ and poisons ratio 0.3 | MO 1.05 | U |
| 4 | A simply supported beam of length 7 m carries a UDL of $3 \mathrm{kN} / \mathrm{m}$ over entire <br> span. Draw SFD and BMD. | MO 2.03 | A |
| 5 | What are the assumption made in the Euler's theory of long column? | MO 3.05 | U |
| 6 | What you mean by a beam? Describe about cantilever beam and simply <br> supported beam? | MO 2.01 | U |
| 7 | A wooden beam of 140 mm wide and 240 mm deep is supported at each end of <br> span of 4 meter. Determine the load, that can be placed at its center, to cause <br> the beam a deflection of 10 mm . take E=6X10 ${ }^{4} \mathrm{~N} / \mathrm{mm}^{2}$ | $\mathrm{MO} \mathrm{3.04}$ | U |

| 8 | A steel rod 5m long and 40mm diameter is used as a column with one end <br> fixed and other free. Determine the load by Euler's formula. Take E=200GPa. | MO3.05 | U |
| :---: | :--- | :--- | :--- |
| 9 | A hollow shaft having an inside diameter 60\% of its outer diameter and has to <br> transmit 200kW at 80rpm. If the shear stress is not to exceed 60 MPa , estimate <br> the diameters of the shaft. | MO 4.01 | A |
| 10 | Define stress in a thin cylinder shell subjected to an internal pressure? | MO 4.03 | R |

3. Answer all questions from the following ( $\mathbf{6 x} 7=\mathbf{4 2}$ Marks)

| 1 | A steel bar ABCD is subjected to point loads $\mathrm{P}_{1}, \mathrm{P} 2, \mathrm{P} 3$ and $\mathrm{P}_{4}$ as shown in fig. Determine the magnitude of the force P 3 necessary for equilibrium. If $\mathrm{P}_{1}=120 \mathrm{kN}$, $P_{2}=220 \mathrm{kN}$, and $\mathrm{P}_{4}=160 \mathrm{kN}$. Also determine the net change in length of the steel bar. Take E=200GPa. | MO 1.05 | U |
| :---: | :---: | :---: | :---: |
|  | OR |  |  |
| 2 | Find the Youngs modulus of a steel specimen of 14 mm diameter and length 200 mm was found to elongate 0.2 mm when it is subjected to a tensile load of 40 kN . | MO 1.05 | U |
| 3 | Draw SFD and BMD. | MO 2.03 | A |
|  | OR |  |  |
| 4 | List down the important points for drawing shear force and bending moment diagrams | MO 2.02 | U |
| 5 | A rod of length 2 m and diameter 25 mm is fixed between end grips and is heated through $100^{\circ} \mathrm{C}$. Young's modulus for the material is $2 \times 10^{5} \mathrm{~N} / \mathrm{mm}^{2}$ and coefficient of linear expansion is $12 \times 10^{-6} /{ }^{\circ} \mathrm{C}$. Calculate the stress induced and load on the end grips when (i) End grips are rigid and (ii) End grips yield by 2 mm . | MO 1.05 | U |
|  | OR |  |  |
| 6 | A simply supported beam of span 6 m carries a u.d.l. of $2 \mathrm{kN} / \mathrm{m}$ throughout and a central point load of 12 kN . Find the position and magnitude of maximum deflection. $\mathrm{E}=200 \mathrm{kN} / \mathrm{mm} 2, \mathrm{I}=24 \times 10^{6} \mathrm{~mm}^{4}$. | MO 3.04 | A |
| 7 | A cylindrical shell 4 m long, 1 m diameter and 12 mm thickness is subjected to an internal pressure of $1.2 \mathrm{~N} / \mathrm{mm}^{2}$. Calculate the longitudinal and hoop stresses, change in diameter, length and volume. Take $\mathrm{E}=2 \times 10^{5} \mathrm{~N} / \mathrm{mm}^{2} ; 1 / \mathrm{m}=0.3$ | MO 4.03 | U |

|  | OR |  |  |
| :---: | :---: | :---: | :---: |
| 8 | In a close-coiled spring, the diameter of each coil is to be 10 times that of wire of the spring and the maximum shear stress is not to exceed $60 \mathrm{~N} / \mathrm{mm}^{2}$. Maximum permissible deflection under a load of 400 N is 10 cm . Taking the shear modulus as $9 \times 10^{4} \mathrm{~N} / \mathrm{mm}^{2}$, determine the diameter of the coil, number of coils and energy stored in the coil. | MO 4.02 | U |
| 9 | The external and internal diameter of a hollow cast iron column is 50 mm and 40 mm respectively. If the length of the column is 3 m and both of its ends are fixed, determine the crippling load using Rankines formulae. Take the values of $\sigma_{\mathrm{c}}=550 \mathrm{~N} / \mathrm{mm}^{2}$ and $\alpha=1 / 1600$ in Rankines formula. | MO 3.05 | U |
|  | OR |  |  |
| 10 | Derive the bending equation and discuss the assumptions for it. | MO 3.02 | R |
| 11 | A thin cylinder of internal diameter 1.25 m contains fluid at an internal pressure of $2 \mathrm{~N} / \mathrm{mm}^{2}$. Determine the maximum thickness of the cylinder if (i) The longitudinal stress is not to exceed $30 \mathrm{~N} / \mathrm{mm}^{2}$. (ii) The circumferential stress is not to exceed $45 \mathrm{~N} / \mathrm{mm}^{2}$. | MO 4.03 | U |
|  | OR |  |  |
| 12 | State and prove Torsion equation. | MO 4.01 | R |
